

Day 4

DIY

- Q1. Create a user with the name *edu*, having full name as *edureka*, home directory set to */home/edureka*, and whose primary group should be *edureka*.
- Q2. How will you display the user id and groups of user *edu* created in the above question?
- Q3. How will you set the password of the user *edu* created in the step above?
- Q4. How will you install an *httpd* package on the Linux machine?
- Q5. How will you check if you have the *ssh* package installed on the server or not?
